

# Scientific Lead, Dermatology, R&D and Scientific Affairs

Wayne, PA

Reports to: Vice President Corporate and R&D Strategy

Palvella Therapeutics is a biopharmaceutical company specializing in the invention, development and ultimately commercialization of novel and highly differentiated products for the treatment of rare genodermatoses. We are an organization firmly committed to supporting the rare diseases community including advocacy groups and the healthcare professionals that treat them.

This role is responsible for identifying new indications and targets for Palvella's QTORIN platform. Collaborating with the VP of R&D, this role will lead the development of preclinical candidates through internal and external collaborations. The role supports preclinical and clinical regulatory documents through scientific and medical analysis.

Responsibilities include, but are not limited to:

- Research new rare genodermatoses indications that support QTORIN
- Lead the preclinical development of novel therapies
- Interact with research organizations and key opinion leaders to design and lead research programs
- Leads authorship of scientific publications
- Support regulatory filings through scientific authorship
- Support business development through scientific analysis of new targets

Qualifications

- MD or PhD, with experience supporting the dermatology therapeutic area a plus
- Strong track record of effective, impactful scientific leadership
- Excellent scientific authorship

Palvella Therapeutics employees work with determination and with respect for each other, consistent with our core values, to achieve our common goals. We give individuals and teams the autonomy to drive development of innovative products and solutions, knowing that integrity is a core value throughout our company. Palvella Therapeutics will offer the successful application a challenging position, where the right candidate will have the opportunity to work with highly specialized people across functions in an informal, multicultural culture, all aiming to make a difference for people living with rare genodermatoses.

Teamwork and respect are central pillars of Palvella Therapeutics' culture and we therefore ensure an inclusive, open, and supportive professional work environment across our international locations. We believe that fostering workplace diversity across social, educational, cultural, national, age and gender lines is a prerequisite for the continued success of the company. We are committed to diversity at all levels of the company and strive to recruit employees with the right skills and competences, regardless of gender, age, ethnicity, etc.
